Meet the People We Help...

Problem

Gwendolyn is a survivor of breast cancer for more than 15 years, she is 56 years of age and has mild to moderate mental retardation. Gwendolyn understands what Breast cancer is and the treatments that follow the disease. In her last exam it appeared that cancer has returned and was in full force this time. It was Gwendolyn's decision to make sure that doctors understood what her wishes were.

Solution

A very personalized POA was set up for Gwendolyn, allowing her to state exactly what she would want as far as treatment and what she would not. This Document will be followed through by all parties involved and has given Gwendolyn peace of mind.

Outcome

With the POA in place, Gwendolyn knows that her wishes regarding her treatment and end of life issues will be honored and executed when the time comes.
